

Music without limits. Any platform. Every business.

Custom Channels puts licensed music and AI audio messaging in one dashboard, with brand control and real flexibility at the store-level, from a single location to hundreds.

INSIDE THE NEW PLATFORM

Give your brand a voice

Build your own playlist, or start from AI recommendations. Human curated and licensed end to end.

Import Spotify playlists

Upload a pre-built Spotify playlist, and receive a commercially licensed playlist in return.

Every location, managed

Assign music and messaging by location, group, or enterprise. No new tool as you grow.

AI audio messaging

AI-voiced promos that can name a local offer or event. Go from approval cycle to live in 15 minutes.

Seamless scheduling

Dayparts, LTOs, and holiday promos set weeks ahead. Schedule it for one store or all of them.

Remote monitoring

See what is playing in real time. Device connectivity, proof-of-play, and role-based permissions.

**Most restaurants have background music.
Very few use it strategically.**

Hardware-agnostic. Works with the stack you run.

Keep the players, screens, and devices you already own. We connect via an API, so music stops being a separate vendor and becomes another output of the systems you run.

RECENT INTEGRATION ANNOUNCEMENTS

TrueSync Media

Full API integration: manage Custom Channels music natively in the TrueSync interface. TV entertainment, music, and in-store messaging in a single pane of glass.

Thanx

AI audio messaging wired to loyalty: sign-ups and redemptions attributable to the messages that played in-store.

Bluesound Professional

Fully licensed, curated music delivered across every zone of a Bluesound Professional system.

Q-SYS

The Custom Channels Q-SYS Verified Plugin is live in the Q-SYS library, with centralized control and streamlined deployment.
